

# Pantera Replacement Seat Belt Latch with floor standoff

by Gerry Romack

Male Latch insert I made to check cars in the slavage yard.

Fits into the female portion with the  
release mechanism

# New locking piece .

.

The mechanism is just 1/16 of an inch longer than the Pantera latch.

File on the backside opening till it  
snaps into place

# A Small flat file does the job

patience

# More patience

# Success

I Rounded the edges for a smoother fit

# Squaring the hole

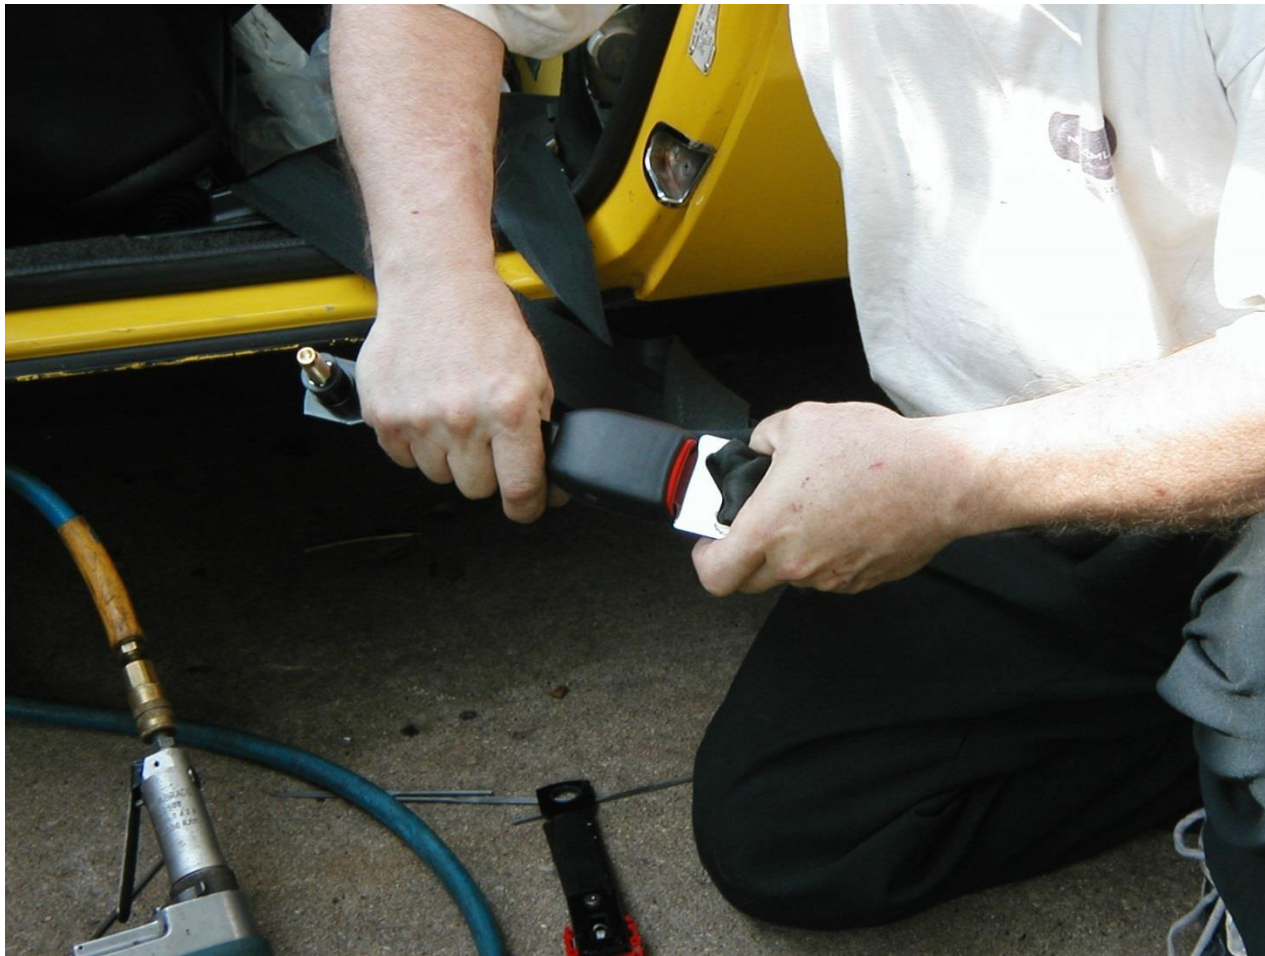

# Actually polishing

A Perfect fit.

Metal standoff holds the seat mechanism up making it easier to Latch.

# Standoff bolt assembly.

# Final note

- Seat belt mechanism was found at
- XXXXXXXXXXXXXXXXXXXX
- Please email
